

AUER Mask Spectacles

Application

The AUER mask spectacles with corrective lens frames have been developed for users of full face masks having defective eyesight. The proven model of transparent plastic ("3 S mask spectacles") has been available for a long time. Now, new fashionable metal frame spectacles are also available for the full face masks 3 S and Ultra Elite. The narrow silver metal frame fits lenses size 48 mm, providing the wearer with an even larger field of vision.

Design and Functioning

The plastic and metal mask spectacles are fitted by means of a special spring holder and adjusted vertically and horizontally with a rubber mounting block (holder for frame). This spring holder design permits quick and secure fitting in the full face mask with the least possible reduction of the field of vision. The proper fit is obtained by sliding the mounting block up or down. The mask spectacles can remain in the AUER full face masks; thus the mask with spectacles is immediately ready for use. For separate storage, the spring holder is turned 90° and the complete spectacles are kept protected in a hard case. The spectacles frame is designed to be fitted with prescription lenses of all corrective strengths including bifocal lenses. Prescription lenses of hardened glass or plastic can be fitted by AUER or a local optician specialized in industrial eye wear.

Features and Benefits

- Prescription lens fitting available from AUER.
- No break of facepiece-to-face seal through frame sides or straps of conventional spectacles.
- Immediate readiness when spectacles are fitted inside the AUER full face mask.
- Easily adjustable by means of rubber mounting block.
- Supplied in hard case; easy handling and protected storage through rotating spring holder.
- The special air flow within the AUER full face masks prevents the spectacles from fogging.
