

ADVANTAGE[®] 200 LS AND 3200 RESPIRATORS

Optimal respiratory protection equipment is essential for workers in a variety of work environments, including chemical, general industrial, pharmaceutical, construction, nuclear, craft trades, and even Do-It-Yourselfers.

MSA's Advantage[®] Respirators and wide selection of cartridges provide the protection you need, whether they are used for precautionary measures or in situations where health-endangering vapors or particulates are present.

Workers worldwide have come to depend on MSA's line of Advantage Respirators, and they equate the Advantage name with innovation, durability, comfort, and safety.

Incorporating MSA's global engineering expertise, Advantage Respirators meet NIOSH and EN standards, while maintaining flexibility and affordability.

For your convenience, Advantage cartridges and filters are interchangeable with all Advantage respirators, both half-mask and full facepiece, simplifying the selection process and eliminating the need to fit-test individuals on many different masks. They are easy to maintain, so your inventory – and your costs – are minimized.

Advantage 200 LS Respirator

When developing the Advantage 200 LS, MSA set a new standard for respiratory protection. It is the first half-mask designed exclusively for people who wear respirators.

The 200 LS Respirator, with its filter technology, meets every requirement of modern respiratory protection. It weighs less than competitive respirators to make it more stable on your face. It feels softer to keep you comfortable, and it adds new style to safety.

The Advantage 200 LS has become the most popular half-mask respirator in the MSA line.

The Advantage 200 LS Respirator provides a better-looking, lighter, and softer facepiece, which is made from a translucent "Ocean Blue" formulation of thermoplastic rubber. The unmatched fit exceeds all previous levels of comfort. And, because the 200 LS facepiece features the same great facial seal as previous models of Advantage half-masks, users of other Advantage half-mask models do not need to be fit-tested again before they wear the Advantage 200 LS Respirator.

The Advantage 200 LS Respirator also features MSA's patented MultiFlex® System – a soft, pliable combination of rubber and plastic that provides a virtually customized fit. In addition, the highly effective AnthroCurve™ Sealing Surface instantly conforms to each wearer, equalizing pressure on the face seal area and eliminating annoying pressure points.

It Fits You In Every Way

Despite its groundbreaking design, the Advantage 200LS Respirator fits your budget as well as it fits your face.

The facepiece has only four components:

- Facepiece blank
- 4-point yoke
- Inhalation/exhalation valves
- Head harness (choice of single or 2-piece neck strap)

The swept-back cartridge and filter design provides for more stability, better weight distribution, and easy visibility.

Advantage 3200 Respirator

As the newest generation of full-face respirators, the Advantage 3200 Respirator sets new standards for comfort and versatility. No matter where your job site is located, you'll be able to see and feel the benefits of the Advantage 3200 Respirator. The Advantage 3200 full-face mask is the perfect complement to the Advantage 200 LS.

Its fit technology is based on the industry-proven face seal of the MSA Ultra Elite® Facepiece, which is based on facial measurement data from more than 8,000 people.

The Advantage 3200 Respirator enhances worker performance because a new design allows even lower breathing resistance and includes a nose cup that reduces fogging in low temperatures or high-humidity conditions.

In addition, the facepiece lens has been engineered to be optically correct, giving you superior visibility and peripheral vision. The wraparound scratch-resistant polycarbonate face piece lens provides a wide distortion-free field of vision. The lens meets all requirements of ANSI Z87.1 including the high-impact performance requirements. It exceeds requirements for haze, prism, and power, while eliminating distortion.

Donning the mask is made easier with MSA's new pre-adjustable straps. With the Advantage 3200 Respirator, you can position the upper straps for a consistent fit and minimal adjustment, time after time. The pre-set upper straps prevent uncomfortable snags during donning and doffing, and also provide a tighter, more secure seal. Wearers also have the option of the new European-style Advantage harness, which dons like a catcher's mask.

The 200 LS integrates well with other PPE

Simplicity

MSA's exclusive Advantage 200 LS and Advantage 3200 Respirators are some of the easiest to use on the market. They solve all comfort problems, and their maintenance is easy to learn. All components can be replaced without special tools in a matter of seconds, and the Advantage 200 LS and 3200 filters and cartridges are interchangeable.

MSA

MSA Ordering and NIOSH Approval Information

The Advantage line of particulate, chemical, and combination cartridges is NIOSH-approved (to 42 CFR, Part 84) and provides lightweight, low-profile performance.

*Escape only. ** Effective against, but not NIOSH-approved for Iodine Vapor.

*** Definitions

N95-Particulate Filter (95% filter efficiency level) effective against particulate aerosols *free of oil*; time use restrictions may apply.

R95-Particulate Filter (95% filter efficiency level) effective against *all* particulate aerosols; time use restrictions may apply.

P100-Particulate Filter (99.97% filter efficiency level) effective against *all* particulate aerosols.

WARNING

An appropriate cartridge change-out schedule must be developed by a qualified professional, unless the cartridge/canister utilizes an end-of-service-life indicator. The change-out schedule must take into account all factors that may influence respiratory protection including specific work practices and other conditions unique to the worker's environment. If using against substances having poor warning properties, there is no secondary means of knowing when to replace the cartridges/canister. In such cases, take appropriate additional precautions to prevent overexposure, which may include a more conservative change-out schedule or using an air-supplied respirator or SCBA. Failure to follow this warning can result in serious personal injury or death. As a reference, below is a partial list of substances having poor warning properties:

Acrolein	Hydrogen cyanide	Nitric acid	Phosphorus trichloride
Aniline	Hydrogen selenide	Nitro compounds	Stibine
Arsine	Methanol	Nitrogen oxides	Sulfur chloride
Bromine	Methyl bromide	Nitroglycerin	Urethane or other diisocyanate-containing paints
Carbon monoxide	Methyl chloride	Nitromethane	Vinyl chloride
Diisocyanates	Methylene chloride	Phosgene	
Dimethyl sulfate	Nickel carbonyl	Phosphine

Flexi-Filter, P95/HF (NIOSH)	10063227				1

These low-profile, flexible pads fit well under a welding hood and with other personal protective equipment. They offer great balance and weight distribution for maintaining a good face seal, while their swept-back design provides improved vision and comfort.

Notes

1. Do not use in atmospheres containing less than 19.5 percent oxygen, in atmospheres containing gases or vapors or in atmospheres immediately dangerous to life and health.
2. Do not use in atmospheres containing less than 19.5 percent oxygen, or in atmospheres immediately dangerous to life and health.
3. Do not wear for protection against organic vapors with poor warning properties or those which generate high heats of reaction with the sorbent material in the cartridge.
4. 99.97 percent efficient against 0.3 micron DOP.

Support Resources

Advantage Technical Support CD

For correct use of any respirator, the user must be instructed properly in its use and maintenance. MSA's Advantage Technical Support CD contains all essential information about Advantage 200 LS and 3200 Respirators, care and use information, instruction manuals, fit-testing forms, parts lists, and cartridge information. The easy-to-use, interactive format is provided in English, Spanish, and French.

Call MSA's Customer Service at 1-800-MSA-2222.

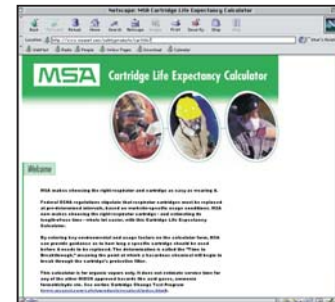

Response® Respirator Selector

The Response Respirator Selector website enables users to find the recommended respirator for more than 700 chemical hazards. This website can help you identify the proper respirator you need, and presents the broadest range of respiratory protective devices available. MSA offers the Response

Respirator Selector on our website at www.MSAnet.com/response.

Cartridge Life Expectancy Calculator

MSA's interactive Cartridge Life Expectancy Calculator will help you determine the life expectancy of specific respirator cartridges in various hazardous situations including how long a cartridge should be used before it must be replaced. This information can be found at www.MSAnet.com/msa

northamerica/msaunitedstates/cartlife.

To meet OSHA's respiratory protection fit-testing requirements, MSA offers facepiece-testing kits and accessories. As you may know, qualitative fit-test methods are subjective in nature and rely on the judgment of the test subject, and quantitative testing methods rely on objective data to determine a proper fit.
