**MSA Custom Systems Offer a Wide Range  
of Offshore Monitoring Solutions**

Not everyone has the same monitoring, control and data acquisition needs. Individual problems require special solutions, which sometimes include greater versatility and unique equipment configurations. MSA Custom Products provide customers with a distinctive combination of solutions, expertise and timeliness.

MSA Custom Products offer individually designed solutions to customer problems. Our custom gas detection and flow systems are built to customer specifications and combine the advantages of various MSA instruments and sensors with our electrical and mechanical engineering expertise.

MSA's Custom Products group is experienced in bringing a total approach to solving a variety of gas monitoring needs. Our group designs and builds unique, individually configured systems employing a wide variety of MSA instruments and sensors. These systems can be wall-mounted, rack-mounted or in freestanding cabinets. MSA Custom Products group also designs systems for hazardous area applications.

(more)

For the detection and monitoring of combustible gases, toxic gases and oxygen levels, MSA Custom Products offer multiple sensing techniques to choose from. These include electrochemical, catalytic bead, solid state and both photoacoustic and non-dispersive infrared (IR) technologies. This wide range enables the utmost in design flexibility.

In custom product design, there is no substitute for experience. With each MSA custom product comes over three quarters of a century of experience in gas detection and flow system design. MSA designs and builds its own system components. Working hand-in-hand with customers, the MSA Custom Products experts help define options and determine the best approach—all with traditional MSA quality and reliability.
