FOR IMMEDIATE RELEASE

MSA Releases SAFECONFIG™ RF Configurator

PITTSBURGH, August 2006 — The SAFECONFIG™ RF Configurator, a new software program designed for the MSA SAFESITE® Multi-Threat Detection System, interfaces directly to the SAFECOM™ Command Center, the data command center of the SAFESITE System. This new, exciting and easy-to-use software program greatly expands the range of an existing SAFESITE System, quickly enabling SAFEMTX™ Detector units to be configured as repeaters.
