FOR IMMEDIATE RELEASE

Chillgard[®] LS Refrigerant Monitor now with improved optics

Pittsburgh, Pa., June 2008— Chillgard LS Monitors, part of MSA's Chillgard Series, now offer micro-machined component technology for consistency, repeatability, optimal reliability, and two-year warranty. Chillgard LS Monitors provide fast, reliable detection for low level leaks of refrigerants. Standard 4-20mA analog output can be connected directly to any existing building automation system or other controller to provide leak indication prior to workers entering rooms containing refrigerant gas. With integral status LEDs and optional strobe, workers are provided with visual indication of status and refrigerant gas levels.
