MSA Releases New Bulletin for Clan Lab Gas Detection

MSA Instrument Division announces the release of *Gas Detection for Clandestine Drug Labs*, a new bulletin detailing use of MSA portable instruments in clandestine drug lab investigations. This new bulletin discusses the dangers and health risks of responding to methamphetamine production sites in addition to portable gas detection options for those responders working at such sites.

MSA portable instruments such as the Sirius[®] Multigas Detector with PID, the MSA FiveStar[®] Alarm and the Solaris[®] and Orion[®] Multigas Detectors offer choices of photoionization, electrochemical and catalytic bead sensor technologies for detection of toxic and combustible gases commonly associated with methamphetamine production. Proper gas detection instruments are essential tools for clan lab site work, offering an excellent combination of ease of use, response speed, sensitivity and versatility so vital to providing maximum benefit and safety to workers and their communities.

For more information on MSA's new bulletin *Gas Detection for Clandestine Drug Labs*, request literature #0800-30, by dialing 1-800-MSA-2222, or contact your nearest MSA sales representative. To learn about MSA portable instruments and our other high quality products, visit our web site at:
