For Immediate Release

MSA Solaris® Multigas Detector Features

Datalogging Option Standard

As of Jan 1, 2006 MSA is offering the datalogging version of the Solaris Multigas Detector for the same price as the non-datalogging version, a \$99 savings. The Solaris Multigas Detector is an economical 4-gas instrument providing simultaneous detection of CO, O₂, H₂S and combustible gas.

One of the smallest, lightest four-gas monitors on the market, the Solaris Multigas Detector is ergonomically designed and provides the best value in its class. Weighing less than 8 ounces, it is comfortable enough to be worn all day and provides reliable protection without interfering with the user's range of motion.

Encased in a rubberized armor that absorbs impact, the Solaris Multigas Detector is designed for the harshest industrial environments, with an IP 6/5 rating for superior protection against liquid and dust ingress. Easily configured to detect up to 4 gases simultaneously, the detector features a world-class triple alarm system with high-intensity, high-visibility alarm lights, an audible alarm of over 100 dB, and a strong vibrating alarm.

(more)

The versatile display features backlighting, providing exceptional contrast for easy reading in low-light conditions and from a variety of angles. An alphanumeric message bar displays commands in “plain English”, easily guiding users through various instrument functions. Simple, intuitive calibration is accomplished with the push of a single button.

The Solaris Multigas Detector is powered with a rechargeable lithium ion battery that offers 14+ hours of continuous run time and outperforms other batteries in extreme environmental conditions. The battery fully recharges in under 4 hours and maintains over 80% of its original capacity after 500 recharge cycles. A charging cradle and power cord are included.

The Solaris Multigas Detector features an outstanding, 2-year all-inclusive warranty. It is ideal for use in confined spaces and other applications in chemical, construction, mining, petrochemical, telecommunications, utilities and other environments.
