For Immediate Release

New MSA ALTAIR™ Single-Gas Detector
Offers More Than Two Years of Maintenance-Free Operation

The ALTAIR Single-Gas Detector from MSA Instrument Division features three sensor options: carbon monoxide, hydrogen sulfide and oxygen. Carbon monoxide and hydrogen sulfide versions can operate for over two years. This long lifespan, coupled with the unit's high performance, results in one of the most cost-effective monitors on the market.

Advanced design offers superior dust and water protection and high resistance to RFI. A rubberized housing and one-button operation provide the durability and ease of use users expect from MSA instruments. The triple-alarm system featuring two bright LEDs, a piercing audible alarm, and a vibrating alarm helps ensure that no alarm condition goes unnoticed.

The ALTAIR Detector automatically records the last 25 alarm events. To read data or change alarm set points simply connect the unit to an MSA infrared adapter using the built-in IR communication port.

(more)

Other features of the ALTAIR Detector include:

- Easy bump checks
- Long-life battery
- Patented MSA-built Button™ sensors
- Rugged suspension clip secures unit during even the roughest use
- Easy-to-read display
