For Immediate Release

MSA Releases Bulletin for Tankscope[®] Combustible Gas Indicator

A new bulletin describing the features and benefits of the Tankscope[®] Combustible Gas Indicator (CGI) is now available from MSA Instrument Division. The sheet also includes product specifications and ordering information.

Designed exclusively for use on oil transport vessels, the Tankscope CGI features a thermal conductivity sensor that detects butane in atmospheres with inert gases. Concentration readings are displayed on an easy-to-read analog meter.

The Tankscope CGI's simplified operation makes it easy to use—there is only one switch and one knob. Powered by “D” cell zinc-carbon batteries, the unit is capable of over 24 hours of continuous operation. Instrument calibration, as well as filament and battery replacement, is simple and easy.

(more)

The Tankscope CGI is equipped with a high-impact, waterproof case with stainless steel hardware. Additional features include a full-hinged lid for unobstructed access to the control panel, a backlit meter for low-light conditions and adjustable waist and neck straps for hands-free operation.

For a copy of the **Tankscope Combustible Gas Indicator Bulletin 0804-29-MC**, dial 1-800-MSA-2222, or write to MSA Instrument Division, P.O. Box 427, Pittsburgh, PA. 15230-0427. For more information about MSA and our other high-quality products, visit our web site at:
