Ways the Cloud-Based Grid Services Can Help Improve Your Gas Detection Program

1 Be Proactive

Receave early warnings on fleet health concerns and exposures to help you protect plants, personnel and assets.

01 Receive daily fleet summary notifications

Take the actions needed to keep your fleet compliant and ready for the job

02 Be aware of exposures

Address worksite safety concerns before they turn into escalated issues.

03 Real-time notifications

Immediately take actions on alerts.

2 Total Visibilily

Your detectors information and readings centralized and available 24/7 from anywhere with an internet connection.

01 360-degree view for yor and your teams

Provide your teams, with a 360–degree view of gas safety operations within your plant. With one click, download and share reports as you need them.

02 Drive employee accountability

Drive employee accountability for proper equipment usage by assigning detectors to departments or directly to users.

03 Training

Easily identify workers that are not using the devices properly and retrain them.

3 Data-Driven Decisions

The information you need, available in a user-friendly dashboard format that supports data-driven decision-making.

01 Identify hazards your workers are exposed to

Use the information to refine your risk assessment and improve worksite safety processes and workflows.

02 Understand the root cause of incidents

Understand the root cause of incidents and initiate preventive measures.

03 Examine historical data & Identify patterns

Intensify training in plants and departments that need the most.

Safety io Grid Services

Compliance assurance and remote monitoring tools for your portable gas detectors.
