EYE PROTECTION

MSA SAFETY SPECTACLES [Comfort and Safety in a variety of styles]

MSA Safety Spectacles protect against the following hazards [with examples]:

IMPACT FROM FLYING PARTICLES [45m/s]

- Machining/ lathe operations.
- Assembly work/ general workshop.

UV-RADIATION

- Sunlight in outdoor activities.
- Quality inspection, laboratories etc.

VISIBLE GLARE

- For drivers of forklifts and other machinery.
- Exposure to strong sunlight, reflections or intense artificial light.

In numerous working environments, like e.g:

Automotive, electronics, textile, metal, chemical, petro-chemical and pharmaceutical industries, as well as utilities, construction, educational institutions and DIY use.

Lens Colour, Characteristics and Finishing Options

Clear

- Most popular lens for indoor/ general use.
- Provides impact protection.
- Provides maximum visual acuity and maximum colour recognition.
- No glare reduction.

Grey

- Use to reduce glare that causes eyestrain and fatigue.
- Good for outdoor applications where a task specific lens is not required.
- Can still recognize traffic and warning signals.
- Provides good colour recognition (utility workers and linespeople).

Amber

- This lens is great when sharpness and contrast are needed and to block out high intensity blue lighting such as UV.
- Filters out hazy light that is harsh on the eyes (everything seems brighter).
- Good for working outside at dawn and dusk and in low light areas such as warehouses.
- Good for overcast or foggy days.
- Should NOT be used for Infrared radiation protection or for night time driving.

Green Shade 3 and 5 IR

- Use any place where there is heat.
- Good for metal making, furnace work, trash incineration and open flames.
- Protects against glare, ultraviolet and infrared radiations.
- Available in different shades which you should choose based on the amount of heat you are exposed to.

WARNING: Ensure that green lenses used contain metallic oxides which block out Infrared radiation.

Not all Green lenses contain these metallic oxides, many only contain green dye and are completely ineffective against Infrared light. Use of simple dyed lenses will cause more damage to eyes than the use of no protection at all!

Indoor/Outdoor Lens - reduces glare and bright light

- The Indoor/Outdoor Lens tones everything down and provides excellent vision in both indoor and outdoor lighting.
- Good for applications where working both indoors and outdoors is required.
- Allows people to wear the same pair of eyewear in both indoor and outdoor environments.

- All lenses are polycarbonate with anti-fog coating and block out 99.9% of UV radiation.

MSA Boxa

- The lightweight in the range at only 25g.
- Sleek, single lens, "cat's eye" spectacle giving a close fit that is especially suited to smaller faces.
- The low profile design has very smooth surfaces.
- Available in clear or grey anti-fog lens.
