*FOR IMMEDIATE RELEASE*

## **Ultima<sup>®</sup> XL/XT Series Gas Monitors offer HART Field Communications Protocol**

PITTSBURGH, April 2007 — Ultima XL/XT Series Gas Monitors offer an affordable choice in continuous gas detection and monitoring while retaining key features of MSA's Ultima X Series Gas Monitors. HART Field Communications Protocol running over 4-20mA output provides convenient setup, calibration, and diagnostics. A remote display is viewed through a portable handheld communicator, host DCS or laptop. Single-sensor units use catalytic, electrochemical and infrared gas detection methods for combustible and toxic gases and for oxygen deficiency. These versatile units are well-suited for applications such as refineries, chemical and petrochemical facilities, steel mills, HVAC applications, water and wastewater plants, mining, and many others.
