FOR IMMEDIATE RELEASE

MSA Launches BIOSENSOR™ 2200R Biological Agent Detector for First Responders

Pittsburgh, Pa., April 2007 –MSA's new BIOSENSOR 2200R Biological Agent Detector is a portable, handheld biohazard detection instrument for rapid detection and analysis of biological agents. On-site portable analysis during white powder response calls offers rapid detection, ease of use, excellent sensitivity, and a low rate of false positives. Exclusive five-minute time-to-answer allows responders to make informed critical decisions more rapidly than with any other biological agent detector. This unique and highly accurate detection method provides rapid measurement of biohazard targets such as anthrax, ricin, and SEB (staph).
