FOR IMMEDIATE RELEASE

MSA's MultiGard™ Gas Sampling System is ideal for HVAC applications

Pittsburgh, Pa., October 2007 – The MSA MultiGard Gas Sampling System uses a common set of analyzers for up to 32 locations. This low-maintenance fixed system detects CO, NO2, O2, and refrigerant gases and delivers the sample to up to four sensors or analyzers. Time sharing of central analyzers reduces installation, operational and maintenance expenses by eliminating multiple systems. Setup is easily configured via the front touch-screen panel display. The MultiGard System directly connects to Allen-Bradley's (AB) Ethernet or Data Highway Plus™ networks.
