42 CFR Oil-Mist Sampling Kits

The National Institute for Occupational Safety and Health (NIOSH) respirator certification standard, 42 CFR Part 84, introduces new ways to select non-powered air-purifying particulate filter respirators. One of the primary concerns of the standard is oil-mist exposure. According to this NIOSH Standard, there are 3 levels of respiratory protection:

N = Not resistant to oil
R = Resistant to oil
P = Oil-Proof

But how do we know whether oil mist is present in the workplace?

MSA's 42 CFR Sampling Pump Kits can help you answer this question by providing convenience and flexibility in oil-mist sampling.
