

Update Release Notice

GALAXY GX2 and MSA Link PRO

Summary

New updates are available for the GALAXY GX2 Automated Test Stands and for MSA Link Pro software. Changes were also made to the Digital Secure USB Keys.

New Software Features

What changed?

This is the most comprehensive software release for **MSA Link Pro** and **GALAXY GX2** yet. Using the feedback from our customers, the following features were added to each software package:

MSA Link Pro Features (v1.0.9.169)

- Automatic clearing of Out of Sync records
- Out of Sync record reporting
- “See My Own Bank” dashboard filtering
- Add custom logos to reports (Logo Express)
- Enhanced security management

GALAXY GX2 Features (v1.09.0169)

- Streamlined GX2 status emails from networked test stands
- Remote management of networked test stands
- Security management of networked test stands

Who should upgrade?

As a best practice, we recommend that all customers upgrade to the latest software versions if they are having trouble using the system with their portable detector. This is especially true for customers that are using ALTAIR portable gas detectors with a previously purchased GALAXY GX2 test system. Older versions of GALAXY GX2 test stand software may not be compatible with new ALTAIR sensor configurations.

How to upgrade

The upgrades are available for download on the MSA website: www.msasafety.com -> Resources -> Product Software Downloads. Click on the Upgrade icons and follow the download directions.

Upgrade Link Pro -
Latest Revision

Upgrade GX2 Firmware -
Latest Revision

Digital Secure USB Key Changes

The Digital Secure USB Keys will no longer ship with MSA Link Pro or GALAXY GX2 software on the key. Customers should download the latest software from the MSA website.

Both keys are needed to use and maintain both products. The MSA Link Pro key will still be needed to open the software license by inserting the digital secure key into the USB port of the user's computer. The GALAXY GX2 key will be needed to manually upgrade individual test stands that are not networked.
